New Release 11.4 is coming soon:

Test the new functions now.
[Download the Beta Release now.](#)

You need Mappetizer only for one project? No problem we have now a 3 month license for only 150 €

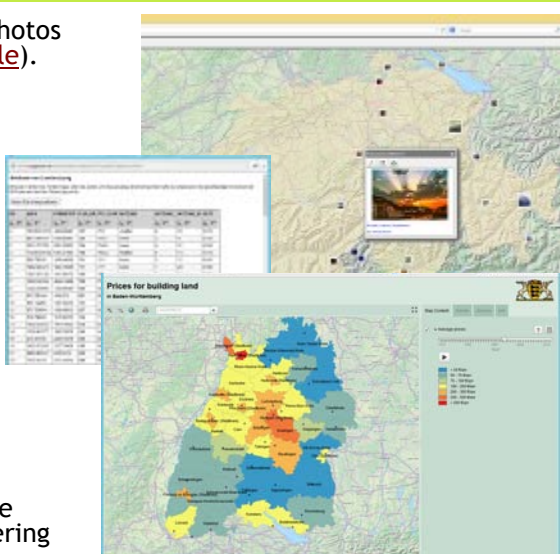

The New Features:

Mappetizer maps can now contain photos coming from Panoramio ([see example](#)).

The map layout is changing when resizing the browser window (Responsive Design). Is the window size below a minimum size then, then map is shown in full screen mode ([see example](#)).

Attribute tables can be downloaded as Excel files ([see example](#)).

The position of legend entries can be changed without changing the rendering sequence of the layers.

Additionally to the basemaps coming from ESRI, you can now define own basemaps (TileMaps) ([see example](#)).

Mappetizer Introductory Offer

You can now start with the new version of Mappetizer for ArcGIS. We offer **30% discount** if you order a Mappetizer for ArcGIS license until **31. October 2014**.

Customer Applications:

Weather Map “Wetterwarte Süd”

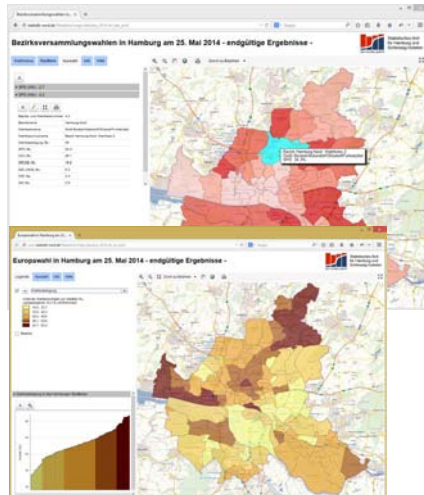

We are proud to present a weather map for the “Wetterwarte-Süd” south germany. The page is fully database driven and shows the current temperature as well as many other parameters for about 50 weather stations in South Germany. You can have a look at the current situation as well as at parameters in the past (depending on the weather station about back to the year 2010). But what we like the most are the extensive use of charts: Daily, monthly, and yearly plots with the temperature and precipitation are provided. Beyond this a comparing view about the min/max temperature for two or more weather stations is also possible.

Elections to the EU Parliament and Bezirksversammlungswahl in Hamburg

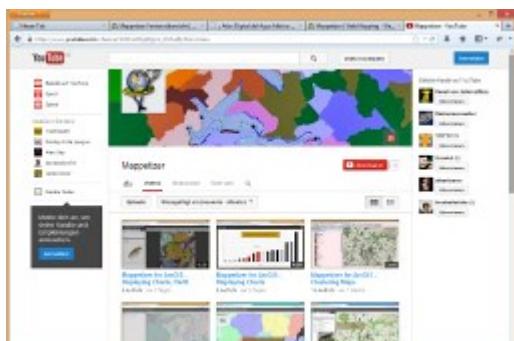

The Statistikamt Nord uses Mappetizer for ArcGIS to present the election data to European Parliament and Bezirksversammlungswahl 2014 in Hamburg. You can switch between political parties and you can see the distribution of votes for each district as a bar chart.
